

# SBS MOBILE V2: ASSET MANAGEMENT ON THE MOVE

## Asset management on the move

To meet all organisation budgets, SBS Mobile was developed following customer demand. As a simple yet effective system, SBS Mobile tracks and manages all assets from a kettle to a digital whiteboard. It also produces an inventory base in a highly cost effective manner.

Each asset can be identified with a unique bar code or radio-frequency identification RFID tag, making the audit process far more simple and straightforward. Details of all the assets are then uploaded in real time via a wireless connection. Alternatively, the account user can work remotely by utilising the web-based database and the SBS Mobile device.

## SBS Mobile features

- ✓ Mobile asset tracking throughout the organisation
- ✓ Efficient data capture of fixed and removable assets
- ✓ Remote or multi-site asset tracking
- ✓ Full asset inventory
- ✓ PAT testing recording
- ✓ Automatic audit mode

## SBS Mobile benefits

- ✓ Automated audits
